Sabin is the Arthur L. and Isabel B. Wiesenberger Associate Professor in the area of design and emerging technologies in architecture at Cornell University. She is Principal of Jenny Sabin Studio, an experimental architectural design studio based in Ithaca, NY USA and director of the Sabin Lab at Cornell AAP, a hybrid research and design unit with specialization in computational design, data visualization, and digital fabrication. Jenny holds degrees in ceramics and interdisciplinary visual art from the University of Washington and a master of architecture from the University of Pennsylvania where she was awarded the AIA Henry Adams first prize medal and the Arthur Spayd Brooke gold medal for distinguished work in architectural design, 2005. She was awarded the highly respected Pew Fellowship in the Arts 2010 and in 2011 she was named 1 of 50 US Artists Fellows. In 2014, she was awarded the prestigious Architectural League Prize for Young Architects. She has exhibited nationally and internationally including in the acclaimed 9th ArchiLab titled *Naturalizing Architecture* at FRAC Centre, Orleans, France and most recently as part of *Beauty*, the 5th Cooper Hewitt Design Triennial. Summary of Research Interests

Jenny E. Sabin's work and research is at the forefront of a new direction for 21st-century architectural practice—one that investigates the intersections of architecture and science, and applies insights and theories from biology and mathematics to the design of material structures. Sabin's research probes the hybridization of algorithmic design techniques generated thru the analysis of biological design problems with experiments in fabrication and material construction. Sabin Design Lab, based at Cornell Architecture, is currently working on two NSF EFRI funded projects with emphasis upon responsive materials and building skins, programmable matter, and adaptive architecture. She is co-founder with Peter Lloyd Jones of the hybrid research and design unit, Sabin+Jones LabStudio, where she was the first non-scientist member of the Institute for Medicine and Engineering (IME), University of Pennsylvania. Sabin continues to collaborate with scientists on NSF funded projects at Cornell University, UPenn, and beyond. Sabin is also a founding member of the Nonlinear Systems Organization (NSO), a research group at PennDesign started by Cecil Balmond, where she was Director of Research. Her research on textile structures and fabrication has brought together participants and collaborators from Nike Inc., SOM, the Philadelphia University Textile Engineering Lab, the Fabric Workshop and Museum, ACADIA, the Canadian Design Research Network and the Fibers and Materials Dept at the School of the Art Institute of Chicago.

GRANTS

Research Grants Awarded

2013 - 2017	NSF EFRI ODISSEI: <i>Cutting and Pasting - Kirigami in Architecture, Technology, and Science (KATS)</i> [\$2.0 Million] Kirigami from the Japanese kiru, "to cut," offers a previously unattainable level of design, dynamics, and deployability to self-folding and -unfolding materials from the molecular to the architectural scale. To achieve this we will cut and join DNA-polymer hybrids to build on the nanoscale and, simultaneously, use three-dimensional printing and modeling to study and prototype geometries on the macroscopic scale. Randell Kamien, Shu Yang, Dan Luo, Jenny Sabin
2013-2014	CCA Biennial Faculty Project Award , Cornell University; <i>eSkin: Simulating Nonlinear Nano-to-Micro Scaled Material Properties and Effects at the Architectural Scale</i> [\$5,000]
2012-2013	President's Council of Cornell Women PCCW Affinito-Stewart Grant ; <i>Generative Fabrication: Making Nonlinearity Pragmatic in Architecture and Construction via Alternative Fabrication Technologies</i> [\$7,380]
2010-14	NSF EFRI-SEED: <i>Energy Minimization via Multi-Scalar Architectures: From Cell Contractility to Sensing Materials to Adaptive Building Skins</i> [\$2.0 Million] Abstract: This proposal seeks to explore materiality from nano- to macroscales based upon understanding of non-linear, dynamic human cell behaviors on geometrically-defined substrates. The insights as to how cells can modify their immediate extracellular matrix (ECM) microenvironment with minimal energy and maximal effect will lead to the biomimetic design and engineering of highly aesthetic, passive materials, and sensors and imagers that will be

- integrated into responsive building skins at the architectural scale. Shu Yang (PI), Jenny E. Sabin, Nader Engheta, Jan Van der Spiegel, Peter Lloyd Jones (co-PIs), Andrew Lucia (Senior Personnel)
